

At **Platinum Irrigation** we are striving to make your landscape the most efficient and healthy one on the block. We use the latest technologies and products available to help meet with the Kamloops sustainability program. The average yard in Kamloops uses 6600 liters of water a week. With the proper design layout and materials chosen you can **save 30%**. With the upgraded weather station controller you can **save 30-70% more**. The average savings would be 3234 liters per watering week. Choose wisely to do your part for the environment, your wallet and the future generations.

**If only the weatherman could be as accurate as your automatic sprinkler system.**

The Rain Bird® ESP-SMT Smart Control System combines proven Extra Simple Programming with weather-based scheduling to save you even more time, money and water.

- Schedules watering based on the amount and intensity of rainfall.
- Brings the precision and sophistication of golf course quality automatic sprinkler system controllers to your home.
- Factors such as soil type, the slope of your lawn, plant type and sun exposure are utilized to optimize your watering schedule to enhance your landscape while saving water and reducing runoff.
- No annual fees.

**Smart Technology has reached its tipping point**

**Zone-specific water calculations**

Different plants have different watering requirements. That's why the ESP-SMT customizes each zone's irrigation schedule. When calculating an accurate ET value for each zone, it factors in location, soil type, landscape slope, plant type/density, sun exposure, sprinkler type and root-depth requirements. Based on this zone-specific data, the ESP-SMT controller engine optimizes the irrigation schedule to promote lush, healthy plant material in each station, while substantially reducing water waste and runoff.

**Now is the time.**

With mounting regulations and severe droughts in many regions of the country, the days when water inefficiency was overlooked are long gone. The future promises even more restrictions for the irrigation industry. But along with these challenges come opportunities. Many provinces and municipalities are offering valuable rebates to help make Smart Technology more profitable.

Never has the need for Smart Technology been greater. And never has Smart Technology been more accurate or marketable than with the Rain Bird ESP-SMT Smart Control System.

**Rotors**

**In-Stem Pressure Regulation**  
By lowering and maintaining water pressure at the optimal level, you can reduce water usage by up to 45 percent.\*  
5000/5000 Plus Series Rotors with PRS

**Industry's Leading Spray Heads**

Trusted for over 30 years, 1800

Series Spray Heads have provided unmatched durability, reliability, and performance.

Superior components and features make the 1800 Series Spray Head the spray head of choice for a wide variety of applications.

**Landscape Drip**

Direct-to-Plant-Root Watering Devices Eliminate overspray and runoff, while watering direct-to-root, to save your customers up to 50 percent in water compared to sprinkler irrigation.
